ABSTRACT

A brewing apparatus including a housing having a movable lid; a water heater connected to the housing; a pod carrier removably connected to the housing; a seal connected to the lid for movement towards and away from a top side of the pod carrier as the lid is moved between an open position and a closed position; and a hot water discharge head connected to the lid for delivering hot water from the water heater in a direction towards the top side of the pod carrier when the lid is in its closed position. When the lid is in its closed position, the movable lid closes over the top side of the pod carrier and, the seal is adapted to be located against a perimeter side of the pod carrier for sealing along the perimeter side.
